

ABSTRACT

1 An automatic flag illumination system for illuminating a
2 flag on a flag pole. The system has a fixture enclosure
3 adapted to be mounted on the flag pole. A light source
4 mounted within the fixture enclosure and a first
5 interchangeable section is supported by the fixture
6 enclosure. A light sensitive device is mounted on the
7 first interchangeable section, the light sensitive device
8 being adapted to activate the light source at dusk. A
9 second interchangeable section has the same features as
10 the first interchangeable section for mounting the light
11 sensitive device and further for being supported by the
12 fixture enclosure.
